

# Curriculum M.Des.-2021

---

Integrated Product Design

**Indian Institute of Information Technology,  
Design and Manufacturing, Kancheepuram**

**Chennai-600 127**

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

**Curriculum**

<b>Semester 1</b>						
Course Code	Course Name	Category	L	T	P	C
DS5000	Foundation for integrated product design (two weeks preparatory activity)	DSC	0	0	0	0
DS5001	Aesthetics, Forms and Sketching	DSC	1	0	3	3
DS5002	Design, Technology and Society	DSC	2	1	0	3
DS5003	Design Research: Theory and Methods	DSC	2	1	0	3
DS5004	Material selection for product designers	DSC	2	1	0	3
DS5005	Design Realization Skills Practice	DSC	0	0	3	2
DS5006	Visual Communication Design	DSC	2	1	0	3
DS5007	Concept Design Project	PCD	1	0	6	5
						22.0
<b>Semester 2</b>						
Course Code	Course Name	Category	L	T	P	C
DS5008	Digital Sketching and Modeling	DSC	1	0	3	3
DS5009	Bio-inspired design	DSC	2	1	0	3
DS5010	Design for quality and reliability	DSC	2	1	0	3
DS5011	Interaction design (UX / UI)	DSC	2	1	0	3
DS5012	Human Factors & Ergonomic Design	DSC	2	1	0	3
DS5013	Embodiment Design Project	PCD	1	0	6	5
DS51XX	Elective I	ELC	2	1	0	3
						23.0
<b>Summer</b>						
DS6000	Internship Phase I	PCD	0	0	9	6
<b>Semester 3</b>						
Course Code	Course Name		L	T	P	C
DS6001	Internship Phase II	PCD	0	0	15	10
DS6002	Strategic management of design and innovation	DSC	2	1	0	3
DS6003	Sustainable Product Service Systems	DSC	2	1	0	3
						16.0
<b>Semester 4</b>						
Course Code	Course Name		L	T	P	C
DS6004	Project	PCD	0	1	24	17
DS61XX	Elective II	ELC	2	1	0	3
DS61XX	Elective III	ELC	2	1	0	3
						23.0

Semester wise Credit Distribution	Credits						
Category	S1	S2	Summer	S3	S4	Total	%
Design Course (DSC)	17	15	0	6	0	38	42.2
Elective Course (ELC)	0	3	0	0	6	9	10
Professional Career Development (PCD)	5	5	6	10	17	43	47.8
Total	22	23	6	16	23	90	100

**M.Des. in Integrated Product Design**  
**Curriculum & Syllabus from 2021 Batch**

Course Title	Foundation for integrated product design (Two Week Preparatory Course)	Course No	DS5000			
Specialization	Integrated Product Design	Structure (LTPC)	0		0	0
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Sudhir Varadarajan					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	1. Unlearn limiting assumptions, risk avoidance, fear of failure 2. Awaken their senses & rediscover their creative selves 3. Experience the impact of design and technology in everyday objects This course is expected to be conducted as part of the induction process (first two weeks)					
Course Outcomes	At the end the course, the students are expected to: <ul style="list-style-type: none"><li>unlearn key limiting assumptions</li><li>demonstrate qualities of immersion in a task</li><li>be excited by the potential of technology and design in improving lives</li><li>become comfortable with sketch-thinking and develop skills in design sketching</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module-1: Induction: (16 hrs)</b> <ul style="list-style-type: none"><li>History of the place; the industrial ecosystem; institution</li><li>Exercises to improve interaction; local visits;</li></ul> <b>Module-2: Learn to observe nature and self (32 hrs)</b> <ul style="list-style-type: none"><li>Know your context - physical and social;</li><li>Unlearning activities; Start journaling</li><li>Observe wholes-parts (trees-leaves); variety of leaves; colors</li><li>Document in a variety of ways - collage; sketch, paint, photograph, video</li></ul> <b>Module-3: Learn to observe everyday objects (32 hrs)</b> <ul style="list-style-type: none"><li>Unbundle everyday objects, observe, reorganize</li><li>Whole-part relations; System physics;</li><li>Observe interplay of art, design, culture, technology in everyday objects</li></ul> <b>Module 4: Take ownership for your learning</b> <ul style="list-style-type: none"><li>Understanding learning strategies</li><li>Self-reflection &amp; purpose for being</li></ul>

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Aesthetics, Forms and Sketching	Course No	DS5001			
Specialization	Integrated Product Design	Structure (LTPC)	1	0	3	3
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Gurunathan					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	1. To introduce elements of art and their application in aesthetics and design 2. To provide in-depth understanding of principles of design, concepts of form, 2D/3D geometries, exploration of surface textures in different materials, relationship between form, materials and process. 3. To provide hands-on training in sketching to enable the students to communicate the design ideas and also to stimulate design improvements					
Course Outcomes	At the end of the course the students will be able to: <ul style="list-style-type: none"><li>Understand aesthetic principles governing the design</li><li>Use freehand sketching to communicate the design ideas through realistic product representations</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Art-Design-Aesthetics Interrelation (8 hrs)</b> Role of art in design and idea communication; Aesthetics in design; Drawing tools and materials; Basic sketching; Emotive qualities of line; line wight and style  <b>Module 2: 2D and 3D forms (12 hrs)</b> Geometric and organic shapes; Shape modifications; Basics of forms; Constructing complex forms from solids; Freehand representation of shapes and forms using orthographic drawings  <b>Module 3: Spatial thinking and visualization (20 hrs)</b> Rendering space in 2D paper – basics of perspective; +/- ve space; white space – composition of objects; Concepts of isometric and perspective drawing and sketching of regular shapes; Scale and proportion; Principles of design in sketching – balance, alignment, emphasis, proportion, movement, pattern, contrast, unity; Freehand generation of complex forms and structures; Product sketching, exploded views and cutaway sections; Quality of light on the forms - Value study and value techniques.  <b>Module 4: Surface qualities and color (12 hrs)</b> Representation of surface characteristics and materials through texture; Relating form to materials and processes of manufacture; Color theory and color harmony; Introduction to color psychology and its application in design – case studies.  <i>Hands-on practice will focus on presentation of design ideas through sketches using conventional tools.</i>

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Design, Technology and Society	Course No	DS5002			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Sudhir Varadarajan					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	1. To provide an understanding of the social and cultural history of design and technology 2. To develop critical thinking skills and ability to surface unstated needs / hidden meanings					
Course Outcomes	At the end of the course the students will develop <ul style="list-style-type: none"><li>An appreciation of historical development of design and technology</li><li>Use sociological perspectives to understand the context of design &amp; navigate the same</li><li>Apply ethnographic methods to surface cultural and social aspects for concept development</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module-1: History of Design &amp; Technology (9)</b> <ul style="list-style-type: none"><li>Industrialization, technology and design</li><li>Design movements - The Bauhaus, Ulm school of design and Indian design</li><li>What is 'Indian' and how it has been defined over time - artifacts, rituals, myths</li></ul> <b>Module-2: Sociology of Design (12)</b> <ul style="list-style-type: none"><li>Key sociological perspectives – functionalist, conflict and interactionist</li><li>Material / temporal / relational dimensions &amp; Actor Network Theory</li><li>What drives creative design teams - Interactionism and Reflexivity</li></ul> <b>Module-3: Ethnographic observations (21)</b> <ul style="list-style-type: none"><li>Immersive observation of everyday objects and interactions</li><li>Gigamapping/rich pictures to capture observations</li><li>Journaling, synthesizing observations</li><li>Field visits: Urban/Rural context/needs/problems</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Design Research: Theory and Methods	Course No	DS5003			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Sudhir Varadarajan					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	1. To introduce students to a variety of theories and methods used in new concept development 2. To enable students to pick and choose appropriate methods for the context					
Course Outcomes	At the end of the course, students are expected to <ul style="list-style-type: none"><li>Apply a set of methods to inquire into a problem situation and define product requirements</li><li>Reflect on the methodological assumptions and strengths and weaknesses of different methods</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module-1: Introduction (6 hrs)</b> <ul style="list-style-type: none"><li>Product development process</li><li>Complexity in the fuzzy front-end of new product development</li><li>Product ontology (form-function-structure-behavior)</li></ul> <b>Module-2: Introduction to design theories and methods of inquiry (6 hrs)</b> <ul style="list-style-type: none"><li>Developments in design methodology – phenomenology, semiotics, information-aesthetic</li><li>Qualitative, quantitative, speculative, experiential modes of research</li></ul> <b>Module-3: Methods to capture requirements/surface needs (12 hrs)</b> <ul style="list-style-type: none"><li>Understanding social, economic (competition, value chains) and technology trends</li><li>Human/User-centered design theory and methods; Systems theory and methods</li></ul> <b>Module-4: Methods to synthesize findings and writing design briefs (18 hrs)</b> <ul style="list-style-type: none"><li>Developing a design brief (problem statement)</li><li>Methods of divergent and convergent thinking to ideate concepts</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Material selection for product designers	Course No	DS5004			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Raguraman M & Dr Gurunathan C					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	<ol style="list-style-type: none"><li>1. To introduce a range of materials used in different stages of product devp (concept to prototype)</li><li>2. To provide detailed understanding of the behavior of different classes of materials with respect to temperature stability, thermal and electrical conductivity, strength, toughness and chemical resistance</li><li>3. To introduce analytical tools and methods for qualified materials selection for product design</li></ol>					
Course Outcomes	After completion of this course, students are able to: <ul style="list-style-type: none"><li>• Apply systematic and objective materials selection based on the principles of Ashby model/ Cambridge Engineering Selector (CES)</li><li>• Define correct conditions and objectives regarding materials selection and analyze and evaluate the role of geometrical aspects in materials selection</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module-1: Introduction and overview (18 hrs)</b> <ul style="list-style-type: none"><li>• Properties of Metals, Ceramics and Polymers</li><li>• Basics of design calculations and design-oriented materials selection,</li><li>• Introduction to Material Property Charts</li></ul> <b>Module-2: Material selection process (18 hrs)</b> <ul style="list-style-type: none"><li>• Rationalizing and Critical Assessment of Material Properties</li><li>• Selecting materials and shape with multiple constraints and objectives</li><li>• Materials selection for industrial design</li></ul> <b>Module-3: Advanced materials &amp; environment (6 hrs)</b> <ul style="list-style-type: none"><li>• Advanced materials design – Composites and Hybrids</li><li>• Materials and environment</li></ul> Evaluation: 70% assignments/activities + 30% End Semester					
Texts & References	<ol style="list-style-type: none"><li>1. Ashby, M.F. (1992), Materials Selection in Mechanical Design, Elsevier, 5th and 4th editions, ISBN:9780081005996</li><li>2. Gordon, M. Joseph (2002); Industrial design of plastics products, ISBN:9780471231516</li><li>3. Karana, Elvin, Owain Pedgley, and Valentina Rognoli, eds. **M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Design Realization Skills Practice	Course No	DS5005			
Specialization	Integrated Product Design	Structure (LTPC)	0	0	3	2
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Jayachandra Bingi					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	To help students develop workshop practice and rapid prototyping skills to realize mockups and concept prototypes					
Course Outcomes	Students will develop skills in workshop practice and rapid prototyping; project management and focusing on delivering outcomes					
Contents of the course (With approximate break up of hours)	<b>Module-1: Exposure to tools/equipment to machine external appearance of simple shapes. (20 hours)</b> a. Wood carving b. Plastic welding and cutting c. Engraving d. Sheet metal works e. Wire cutting <b>Module-2: Exposure to rapid prototyping tools – subtractive, additive and electronic (8 hours)</b> <b>Module-3: Practice in realizing simple products in terms of shape, size and functionality etc. (14 hours)</b>  Evaluation: Assignments / Activities (70%); End Semester (30%)					
Texts & References	1. Bjarki Hallgrimsson (2012), Prototyping and Modelmaking for Product Design, Lawrence King Publishing, ISBN:9781856698764					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Visual Communication Design	Course No	DS5006			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Raguraman Munusamy					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	To introduce students to a practice-based, hands-on approach to visual communication design					
Course Outcomes	<p>On completion of this course, students will be able to:</p> <ul style="list-style-type: none"><li>Understand differences between visual UX, UI, graphic, and web design and construct an artist’s statement</li><li>Apply the concepts found within elements and principles of design to incorporate theories and concepts when discussing visual communication,</li><li>Create a brand identity such as business cards, packaging, and advertising, design logos, especially as related to brand identity</li><li>Use digital tools to design graphical images, understand the difference between different graphics and image file formats.</li></ul>					
Contents of the course (With approximate break up of hours)	<p><b>Module 1: Introduction to Visual Communication Design (6 hrs)</b></p> <ul style="list-style-type: none"><li>Definition, Graphic design vs art, Design thinking, Visual design tools and Image files</li><li>Semiotics and design</li></ul> <p><b>Module 2: Typography and typographic elements (6 hrs)</b></p> <ul style="list-style-type: none"><li>Historical evolution, Serif vs sans-serif fonts, Legibility vs readability, Use in ads, signs, movie posters</li></ul> <p><b>Module 3: Composition, Creativity, Artistry, Aesthetics and the design process (6 hrs)</b></p> <ul style="list-style-type: none"><li>Focus, Leading lines, Scale/hierarchy, Contrast, Repetition, White space and Rule of thirds</li><li>Creativity vs Innovation, Aesthetics and their evolution, Creative/Design Process and flow</li></ul> <p><b>Module 4: Symbolism and collage (12 hrs)</b></p> <ul style="list-style-type: none"><li>Symbols and signs, Psychoanalytical symbols, Metaphor in visual design, Evolution of symbols and metaphor</li><li>Collage, Photomontage, Assemblage, Digital collage/e-Collage, Influence of movements: Dada, Surrealism, Expressionism</li></ul> <p><b>Module 5: Visual identity and branding (12 hrs)</b></p> <ul style="list-style-type: none"><li>Visual identity, branding, logo design, UI/UX and design for the web, advertising, brochures, print and posters.</li></ul> <p>Evaluation: 70% assignments/activities + 30% End Semester</p>					
Texts & References	<p>1. Umberto Eco (1978), A theory of semiotics, John Wiley &amp; Sons, ISBN:9780253202178</p> <p>2. Hunt (2017), Visual Communication Design, Bloomsbury Academic, New Edition, ISBN:9781474221573</p>					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Concept Design Project	Course No	DS5007			
Specialization	Integrated Product Design	Structure (LTPC)	1	0	6	5
Offered for	Master of Design (Semester 1)	Status	Core X		Elective	
Prepared by	Dr Sudhir Varadarajan					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	To encourage the students to identify a domain and problem of interest, and conceptualize and showcase a new product concept using all the theories, methods and tools learnt in the 1 <sup>st</sup> semester courses					
Course Outcomes	At the end of the course, the student is expected to: <ul style="list-style-type: none"><li>gain confidence in dealing with the fuzzy front end of product innovation</li><li>gain practical hands-on experience in doing design research, making design choices</li><li>conceptualizing and pitching a new product concept to external industry experts</li></ul>					
Contents of the course (With approximate break up of hours)	The concept design project is expected to be done in a team. The team must experience the process of norming, forming and performing					
	The process followed will be based on the methods learnt in the Design Research course, supplemented by the content and skills learnt in other courses					
	Project management, documentation and presentation skills will be key aspects that will be monitored					
	The activity will be carried out in the design studio, and supported by regular design reviews with peers, faculty, and mentors					
	Evaluation: Evaluation: 70% Continuous assessment + 30% Final Concept Presentation					
Texts & References	<ol style="list-style-type: none"><li>Dan Cuffaro and Isaac Zaksenberg (2013), The Industrial Design Reference &amp; Specification Book: Everything Industrial Designers Need to Know Every Day, Rockport publishers, ISBN:9781610587891</li><li>Bruce Hanington and Bella Martin (2017), The Pocket Universal Methods of Design: 100 Ways to Research Complex Problems, Develop Innovative Ideas and Design Effective Solutions, Rockport publishers, ISBN:9781631593741</li><li>Donald A Schon (1984), The reflective practitioner: How professionals think in action, Basic Books, ISBN:9780465068784</li></ol>					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

**Syllabus for M.Des courses (Semester 2):**

Course Title	Digital Sketching and Modeling	Course No	DS5008			
Specialization	Integrated Product Design	Structure (LTPC)	1	0	3	3
Offered for	Master of Design (Semester 2)	Status	Core X		Elective	
Prepared by	Dr Gurunathan C					
Prerequisite	Studies of Form and Design Sketching	To take effect from	2021 Batch			
Course Objectives	1. To introduce the advanced sketching and modeling concepts needed for product design 2. To provide hands-on training in computer-based sketching and 3D modeling tools.					
Course Outcomes	Students will be able to demonstrate drawing and modeling skills to communicate the design ideas/concept products using computer-based tools					
Contents of the course (With approximate break up of hours)	<b>Module-1: Digital Product Sketching (21 hrs)</b> <ul style="list-style-type: none"><li>● Introduction to computer-based sketching tools (3 hrs)</li><li>● Digital sketching of planar shapes, curved shapes and objects (6 hrs)</li><li>● Digital sketching of concept products (9 hrs)</li><li>● Colors and material representation using software (3 hrs)</li></ul> <b>Module-2: 3D Modeling (21 hrs)</b> <ul style="list-style-type: none"><li>● Introduction to computer-based modeling tools (6 hrs)</li><li>● Development of 3D forms and objects using software (6 hrs)</li><li>● Photorealistic rendering using software tools (3 hrs)</li><li>● Product animation and concept presentation / AR/VR immersive experience (3 hrs)</li><li>● Artificial intelligence led improvisation in design (generative design) (3 hrs)</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

Thomas (2012); How to Render: the fundamentals of light, shadow and reflectivity, Design Studio Press, ISBN:9781933492964					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Bio-inspired design	Course No	DS5009			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core	X	Elective	
Prepared by	Dr Jayachandra Bingi					
Prerequisite	Design Research	To take effect from	2021 Batch			
Course Objectives	1. To give the student an exposure of bio-inspired design principles 2. To train the student in applying the bio-inspired methodologies for innovation 3. To introduce different perspectives of bio-inspired design and future scope of this valuable domain					
Course Outcomes	After completion of this course, the student is expected to: <ul style="list-style-type: none"><li>Describe methods for creative design</li><li>Identify mechanical working principles of biological phenomena - explain their construction, motion, and/or processing mechanisms - formalize the essence, derive non-conventional design principles</li><li>Implement them in innovative devices - summarize the transition process from the biological to the mechanical domain - present their design in drawings and working models.</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Introduction (6 hrs)</b> <ul style="list-style-type: none"><li>Basic principles, building blocks, material property charts, how the study of nature’s designs can help engineers, examples of successful biomimetic designs. Mechanical design – hierarchical construction, bio-composites, structure &amp; properties of bamboo, silks, bones, teeth, shells, antlers and beaks, impact resistance, fracture mitigation, damping, self-healing.</li></ul> <b>Module 2: The Bio-inspired Design Approach (3 hrs)</b> <ul style="list-style-type: none"><li>Finding the biological information, Dealing with friction, Innovative designing with ACRREx (Abstracting, Categorizing, Reflecting, Reformulating and Extending) method.</li></ul> <b>Module 3: Bio-inspired Design Methodology (6 hrs)</b> <ul style="list-style-type: none"><li>Problem solving, TRIZ, innovation and efficiency, functions, integration between biology design and innovation, methodology chart.</li></ul> <b>Module 4: Bio-designing Perspectives (27 hrs)</b> <ul style="list-style-type: none"><li>Materials and surfaces: Muscles and artificial muscles, lotus effect, gecko adhesion, Desert beetle, pitcher plants, bio-fouling, coatings. Silver ant and heat dissipation, insulation of fur and feathers, constructal theory.</li><li>Sensors: Biological sensors, Bio-inspired sensors</li><li>Control: Robot controllers, Soft robotics, Bio-inspired Artificial intelligence (Evolutionary &amp; Developmental Systems, Neural Systems, Immune Systems, Behavioral Systems and Collective systems)</li><li>Bio-optics – structural colors, compound eyes, antireflection, stealth, imaging</li><li>Navigation – short- and long-range navigation techniques of bees, ants, turtles &amp; migratory birds.</li><li>Bio-inspired design task</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Design for quality and reliability	Course No	DS5010			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core X		Elective	
Prepared by	Dr Raguraman Munusamy					
Prerequisite	Probability and Statistics at undergraduate level	To take effect from	2021 Batch			
Course Objectives	The objectives of the course are to help engineering students understand: 1. To understand concepts of quality and reliability 2. To evaluate the overall reliability of a system from component reliability.					
Course Outcomes	On completion of the course, students are able to: <ul style="list-style-type: none"><li>Model repairable and non-repairable systems and calculate failure/repair rate, reliability, availability</li><li>Use various probability density distributions significant to reliability calculations</li><li>Fit a given failure dataset of a product into a Weibull distribution and estimate the reliability</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Concepts of Product Quality and testing (6)</b> <ul style="list-style-type: none"><li>Quality Function Deployment / House of Quality</li><li>Software testing for quality</li><li>Electronic products testing for quality</li></ul> <b>Module 2: Concepts of Reliability (9)</b> <ul style="list-style-type: none"><li>Basic concepts of repairable and non-repairable systems</li><li>Reliability, Availability and Maintainability</li></ul> <b>Module 3: Failure data analysis (9)</b> <ul style="list-style-type: none"><li>Fitting discrete and continuous distributions to failure data sets, Weibull analysis, estimation of important reliability parameters</li></ul> <b>Module 4: Calculation of System Reliability from Component reliabilities (12)</b> <ul style="list-style-type: none"><li>Markov modeling of repairable and non-repairable systems</li><li>Reliability Logic Diagrams</li><li>Fault-tree analysis</li></ul> <b>Module 5: Preventive and Predictive maintenance (6)</b> <ul style="list-style-type: none"><li>Failure Modes and Effects Analysis</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Interaction design (UX / UI)	Course No	DS5011			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core X		Elective	
Prepared by	Dr Raguraman Munusamy					
Prerequisite		To take effect from	2021 Batch			
Course Objectives	1. To introduce students to interaction design for a variety of applications. 2. To provide principles, patterns and processes for interaction design, rapid prototyping, user interface (UI) and user experience (UX) design 3. To develop skills that can be applied to web publishing, mobile app development, game development, entertainment and artistic performances					
Course Outcomes	Upon successful completion of this course, students are able to: <ul style="list-style-type: none"><li>Identify basics of both analog and digital interactions</li><li>Apply disciplined visualization and the design process, implementing design principles</li><li>Understand the history of interaction design and explore current trends in user experience design</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module:1: Introduction and State of the Art (12 hrs)</b> <ul style="list-style-type: none"><li>Touch Screens vs. real touch and feeling</li><li>Inspirations from food, fashion, and fitness</li><li>Interaction paradigms and materials for real “touch”</li></ul> <b>Module-2: Going beyond heads-down interaction (24 hrs)</b> <ul style="list-style-type: none"><li>Building interfaces that allow users to be adventurous and individual</li><li>UX as performance</li><li>Moving towards mindful interaction</li><li>The bigger picture</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Human Factors & Ergonomic Design	Course No	DS5012			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core X		Elective	
Prepared by	Dr Raguraman Munusamy					
Prerequisite		To take effect from	2021 Batch			
Course Objectives	The objective of this course is to help students understand 1. Different physical, physiological and psychological capabilities and limitations of human beings, 2. Generation of ergonomic specifications 3. Application of ergonomic principles to various products, interfaces and environments for maximizing user satisfaction and minimizing risk involved in the usage of the design					
Course Outcomes	On completion of the course, students will be able to: <ul style="list-style-type: none"><li>● Apply the concepts of the human factors and ergonomics in design to complete the several projects in relation to various disciplines</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Introduction and overview (10 hrs)</b> <ul style="list-style-type: none"><li>● History of human factors, multi-disciplinary engineering, human machine system, characteristics of system, information theory, types of information, selection of display modality, coding of information, compatibility, memory, decision making, attention, text, graphics, symbols, quantitative visual display, representational display, auditory, tactual and olfactory displays.</li></ul> <b>Module 2: Anthropometry (10 hrs)</b> <ul style="list-style-type: none"><li>● Need for anthropometry, data collection methodology, measuring procedures, tools, statistical analysis of data for percentile calculation, anthropometric measurements, percentile calculation, usage of the anthropometric percentile values, ergonomic guidelines for products, equipment and accessories, anthropometry in applications</li></ul> <b>Module 3: Biomechanics (12 hrs)</b> <ul style="list-style-type: none"><li>● Biostatics – static equilibrium equations, musculoskeletal system, problems in mechanics of upper extremity and hand, lower extremity and foot, bending, lifting and carrying,</li><li>● Biodynamics – linear kinematics, angular kinematics, human body kinetics, human body impact and collision, surface electromyogram, electrocardiogram and heart rate measurement</li></ul> <b>Module 4: Virtual ergonomics (10 hrs)</b> <ul style="list-style-type: none"><li>● Digital Human Modeling (DHM), anthropometric models, models for production design, biomechanical models, anatomical models, cognitive models,</li><li>● DHM packages – selection strategies, Functionalities, Virtual ergonomics evaluation techniques – Rapid Upper Limb Assessment, field of vision, reach envelopes, accessibility and clearance analysis, discomfort analysis, Applications of DHM</li></ul> Evaluation: 70% assignments/activities + 30% End Semester					
Texts & References	<ol style="list-style-type: none"><li>1. M. S. Sanders and Ernest J. **M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Embodiment Design Project	Course No	DS5013			
Specialization	Integrated Product Design	Structure (LTPC)	1	0	6	5
Offered for	Master of Design (Semester 2)	Status	Core X		Elective	
Prepared by	Dr Sudhir Varadarajan					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	The objective of this course is to encourage the students to translate their concepts into a minimum viable product (PoC) using all the theories, methods and tools learnt in the 1 <sup>st</sup> and 2 <sup>nd</sup> semester courses					
Course Outcomes	Students will develop skills in workshop practice and rapid prototyping; project management and focusing on delivering outcomes					
Contents of the course (With approximate break up of hours)	<b>Module-1: Minimum viable product plan (3 hours)</b> <ul style="list-style-type: none"><li>● Markets and Needs</li><li>● Business Goals</li><li>● Key features</li></ul> <b>Module-2: Core Product Architecture (6 hours)</b> <ul style="list-style-type: none"><li>● Storyboarding of the product core</li><li>● Framework for mechanical, electronics and computing paradigm</li></ul> <b>Module-3: Design for Manufacture &amp; Assembly (3 hours)</b> <ul style="list-style-type: none"><li>● Manufacturing Process: Form</li><li>● Assembly constraints: Fit</li><li>● HF/Ergonomic considerations</li><li>● Interaction design</li><li>● Quality and Reliability considerations</li></ul> <b>Module-4: Developing the Proof of Concept (30 hours)</b> <ul style="list-style-type: none"><li>● Build</li><li>● Assemble</li><li>● Iterate</li><li>● Validate</li><li>● Pitch</li></ul> Evaluation: 70% Continuous assessment + 30% Final Demo

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Elective-1:

Course Title	Design of Hybrid and Electric Vehicle	Course No	DS5100			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core		Elective X	
Prepared by	Dr Raguraman Munusamy					
Prerequisite	B.Tech (Mechanical / Electrical)	To take effect from	2021 Batch			
Course Objectives	This course will provide a broad technical knowledge and practical expertise of hybrid and electric vehicle (HEV) technologies, analysis, design, component selection and sizing at both system and vehicle level.					
Course Outcomes	<p>On successful completion of this course students will be able to:</p> <ul style="list-style-type: none"><li>Analyse the different powertrain architecture options and select the appropriate solutions within realistic performance and commercial constraints.</li><li>Evaluate various technology options for (electrical and mechanical) energy generation, storage, transmission, and management for a HEV</li><li>Size various HEV systems, within the constraints like performance, fuel economy and packaging.</li></ul>					
Contents of the course (With approximate break up of hours)	<p><b>Module 1: Introduction to Electric Vehicle (3 hrs)</b></p> <ul style="list-style-type: none"><li>History and Components of Electric Vehicle, Comparison with Internal combustion Engine : Technology, Benefits and Challenges, EV classification and their electrification levels and terminologies</li></ul> <p><b>Module 2: Motor Torque Calculations for Electric Vehicle (6 hrs)</b></p> <ul style="list-style-type: none"><li>Calculating the rolling resistance, grade resistance, acceleration, force and finding the total tractive effort, torque required on the drive wheel.</li></ul> <p><b>Module 3: Electric Vehicle Architecture Design (9 hrs)</b></p> <ul style="list-style-type: none"><li>Types of EV and components, electrical protection and system requirement, Photovoltaic solar based EV design, Battery Electric vehicle (BEV), Hybrid electric vehicle (HEV)</li><li>Plug-in hybrid vehicle (PHEV), Fuel cell electric vehicle (FCEV), Electrification Level of EV</li></ul> <p><b>Module 4: Electric Drive and controller (6 hrs)</b></p> <ul style="list-style-type: none"><li>Types of motors, selection and sizing of motor, RPM and torque calculation of motor, motor controllers, component sizing, physical locations, mechanical and electrical connection of motor</li></ul> <p><b>Module 5: Energy Storage Solutions (ESS) (6 hrs)</b></p> <ul style="list-style-type: none"><li>Cell Types (Lead Acid/Li/NiMH), battery charging and discharging calculation, cell selection and sizing, battery lay outing design, battery pack Configuration, construction and selection criteria.</li></ul> <p><b>Module 6: Battery Management System(BMS)/Energy Management System (EMS) (6 hrs)</b></p> <ul style="list-style-type: none"><li>Need of BMS, rule based control and optimization based control, software-based high level supervisory control, mode of power, behavior of motor etc</li></ul> <p><b>Module 7:Electric Vehicles charging station (6 hrs)</b></p> <ul style="list-style-type: none"><li>Type of charging station, selection and sizing of charging station, components of charging station, single line diagram of charging station</li></ul> <p>Evaluation: 70% assignments/activities + 30% End Semester</p>					
Texts & References	<ol style="list-style-type: none"><li>C.M. Jefferson &amp; R.H. Barnard (2002), Hybrid Vehicle Propulsion, WIT Press, ISBN: 9781853128875</li><li>James Larminie and John Lowry (2012), Electric Vehicle Technology Explained, Oxford Brookes University, Oxford, UK, ISBN:9781119942733</li><li>John Miller (2010), Propulsion Systems for Hybrid Vehicles, Institute of Electrical Engineers, UK, ISBN: 9781849191470</li><li>Iqbal Husain (2010), Electric and Hybrid Vehicles – Design Fundamentals, CRC Press, ISBN:9781439811757</li><li>Chris Mi, M A Masrur, D W Gao (2011), Hybrid Electric Vehicles – Principles and applications with practical perspectives,” Wiley, ISBN:9780470747735</li><li>Vivek D Bhise (2017), Automotive product development: A systems engineering implementation, CRC Press, ISBN:9781498706810</li></ol>					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Design of Medical Devices	Course No	DS5101			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core		Elective X	
Prepared by	Dr Raguraman Munusamy					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	1. Introduce the process of medical device design - the non-technical factors that impact a medical technology’s clinical and market success, and to emerging themes that are shaping healthcare innovation 2. Challenge students to apply design thinking to the broader healthcare system.					
Course Outcomes	On successful completion of this course, • Students gain exposure to clinical need identification, stakeholder interviews, ideation, and prototyping. • Students will become experts on intellectual property, FDA regulation, reimbursement, and startup financing introduce non-technical factors that help shape an innovation’s path to impact.					
Contents of the course (With approximate break up of hours)	<ul style="list-style-type: none"><li>• Introduction – Medical Device Development: Academia vs. Industry</li><li>• Project Management – How corporations manage medical projects</li><li>• Pre-clinical Device Development – Research projects</li><li>• Regulatory considerations for medical device development</li><li>• Manufacturing, Quality Control, and Quality Assurance</li><li>• Business – What makes corporations tick and research labs tock</li><li>• Marketing medical devices, and the basics of sales forces</li><li>• Clinical trials, CRA’s, and CRO’s</li><li>• Design Controls: DHF, Proposal, DDP, Inputs, Outputs, Specifications</li><li>• Design Controls: Verification, Validation, Transfer</li><li>• Risk Analysis: FMECA, Risk analysis document</li><li>• Organization types, putting together project teams, Project Management: The Sequel</li><li>• Consultants – Role in medical device development, Advamed, Anti-kickback statute, Confidentiality</li></ul> Evaluation: 70% assignments/activities + 30% End Semester					
Texts & References	1. Paul H. King, Richard C. Fries (2009), Design of Biomedical Devices and Systems, CRC Press, ISBN:9781420061796 2. Richard C. Fries (2001), Handbook of Medical Device Design, Taylor & Francis, ISBN:9780429285141 3. Peter Ogrodnik (2019), Medical Device Design, Academic Press, ISBN:9780128149638 4. Paul Davim (2012), The Design and Manufacture of Medical Devices, Woodhead Publishing, ISBN:9781908818188					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Embedded Kinetic Artwork	Course No	DS5102			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 2)	Status	Core		Elective X	
Prepared by	Dr Noor Mohammad					
Prerequisite	Undergraduate engineering	To take effect from	2021 Batch			
Course Objectives	<ul style="list-style-type: none"><li>• Introduce the concept of sculpture and history.</li><li>• Design concepts of the sculpture and kinetic sculpture</li><li>• Aesthetics and kinetic art work in building sculpture.</li><li>• Embedded systems, sensors, actuators and programming models to realize the kinetic sculptures.</li></ul>					
Course Outcomes	Students understand <i>creative problem solving</i> both in engineering and the arts. Students can understand and design the moving and innovative sculptures					
Contents of the course (With approximate break up of hours)	<b>Module-1: Programming and Electronics fundamentals (18 hrs)</b> <ul style="list-style-type: none"><li>• Programming fundamentals</li><li>• Electronics fundamentals– Input sensors (switches, potentiometers, resistive sensors including light, temperature, flex, etc., rangefinders, optical switches, etc.)– Output actuators (servos, DC motors, stepper motors, LEDs, relays, switching transistors, etc.)</li><li>• Programming reactive systems– External chip interfacing with protocols such as SPI – Interrupt prog</li></ul> <b>Module-2: Constructing Kinetic Art (24 hrs)</b> <ul style="list-style-type: none"><li>• Art history review of kinetic art</li><li>• Discussion of contemporary kinetic artists (Jim Campbell, Jack Dollhausen, Arthur Ganson, Rebecca Horn, Dan Rozin, Sabrina Raaf, Alan Rath, Peter Vogel, etc.)</li><li>• Formal elements of 3d art such as aesthetics, proportion, and balance</li><li>• Material studies (plastic, metal, paper, wood, etc.)</li><li>• Mechanical linkages and physical construction</li><li>• Concepts and meaning in art– Artistic design process</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

**Syllabus for M.Des courses (Semester 3):**

Course Title	Strategic management of design and innovation	Course No	DS6002			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 3); Delivered Online	Status	Core X		Elective	
Prepared by	Dr Sudhir Varadarajan					
Prerequisite		To take effect from	2021 Batch			
Course Objectives	1. To help designers understand the innovation challenge from entrepreneurial/managerial perspectives 2. To introduce designers to the different paradigms and processes of managing product innovation					
Course Outcomes	On completion of the course, students will have a familiarity with: <ul style="list-style-type: none"><li>Innovation processes and structures such as R&amp;D team, the pros and cons of various R&amp;D organizational structures, and challenges of innovation in large and small firms;</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Introduction (9hrs)</b> <ul style="list-style-type: none"><li>Innovation – multi-disciplinary perspective</li><li>Innovation as a new management object</li><li>Processes used to explore innovations along the technology, market and strategy dimensions</li></ul> <b>Module 2: Design activity and Innovation capability (9hrs)</b> <ul style="list-style-type: none"><li>Design: An activity underlying all innovations</li><li>Innovative design – an approach for transforming identity of objects</li></ul> <b>Module 3: Design capacities in innovative firms (12hrs)</b> <ul style="list-style-type: none"><li>Case studies of highly innovative firms</li></ul> <b>Module 4: Innovative design: tools &amp; organizational strategies (12 hrs)</b> <ul style="list-style-type: none"><li>Strategies to effectively exploit the value of innovation, including innovation platforms that include multiple products, portfolios, standards and business models</li><li>Processes, structures and strategies for exploring, executing and exploiting innovations that established firms can use to renew their foundations in the face of disruptive innovations</li></ul> Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Sustainable Product Service Systems	Course No	DS6003			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 3) (Delivered Online)	Status	Core	X	Elective	
Prepared by	Dr Raguraman Munusamy					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	1. To introduce concepts of sustainable design of product-service systems 2. To provide an understanding of methods and tools for sustainable design					
Course Outcomes	At the end of the course, the students should be able to appreciate <ul style="list-style-type: none"><li>Product-service systems which are also referred to as servicizing, resource-efficient business models, green business models, or circular business models</li><li>create designs that are sustainable in terms of environmental burden and resource use, whilst developing product concepts as parts of sustainable whole systems, that provide a service or function to meet essential needs</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Introduction to Product Services systems (6hrs)</b> <ul style="list-style-type: none"><li>Socio-technical systems</li><li>Environmental Impact</li></ul> <b>Module 2: Environmentally-responsive design methodologies (18hrs)</b> <ul style="list-style-type: none"><li>Industrial ecology</li><li>Dematerialization</li><li>Design for reuse / modularity</li><li>Design for recycling</li><li>Remanufacturing: issues/problems, current and future developments</li></ul> <b>Module 3: Alternative resources (10 hrs)</b> <ul style="list-style-type: none"><li>Alternative energy</li><li>Alternative materials</li><li>Sustainable packaging.</li></ul> <b>Module 4: Life-cycle assessment methods (8hrs)</b>  Evaluation: 70% assignments/activities + 30% End Semester

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

**Syllabus for M.Des courses (Semester 4):**

Elective-2:

Course Title	Mathematics for Designers	Course No	DS6100			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 4)	Status	Core		Elective X	
Prepared by	Dr Nachiketa Mishra					
Prerequisite	Basic mathematics	To take effect from	2021 Batch			
Course Objectives	To develop an understanding of mathematical principles behind algorithms for innovative design by bringing together mathematics, computer science, engineering design and art					
Course Outcomes	<ul style="list-style-type: none"><li>Understand mathematical logic behind structures;</li><li>Ability to develop mathematical models for generative art</li></ul>					
Contents of the course (With approximate break up of hours)	<p><b>Module 1: Origami and paper folding (9 hrs)</b></p> <ul style="list-style-type: none"><li>History of Origami,</li><li>Physical and geometric properties of paper and folding,</li><li>Special types of origami: pureland, box-pleating, tiling, circle packing</li></ul> <p><b>Module 2: Geometry and mathematical design (15 hrs)</b></p> <ul style="list-style-type: none"><li>Basic on fractal geometry and dimensions.</li><li>Fractal concepts applied to design</li><li>Julia set, Mandelbrot set</li><li>Phi, golden ratio and golden angle in product design,</li><li>Polyhedra and platonic solids.</li></ul> <p><b>Module 3: Geometric folding algorithms (18 hrs)</b></p> <ul style="list-style-type: none"><li>Upper and lower bounds</li><li>Planner linkage mechanism</li><li>Rigid frameworks</li><li>Reconfiguration of chains</li><li>Locked chains</li></ul> <p>Evaluation: 70% assignments/activities + 30% End Semester</p>					
Texts & References	<ol style="list-style-type: none"><li>Bovill, Carl (1996), Fractal Geometry in Architecture and Design, Boston: Birkhäuser, ISBN:9781461269182</li><li>Demaine, Erik, and Joseph O'Rourke (2007), Geometric Folding Algorithms: Linkages, Origami, Polyhedra. Cambridge University Press, ISBN:9780521857574</li><li>George Stiny (2008), Shape – Talking about seeing and doing, MIT Press, ISBN:9780262693677</li><li>Lang, Robert (2011), Origami Design Secrets: Mathematical Methods for an Ancient Art, CRC Press, ISBN:9781568814360</li></ol>					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Model Based Design and Manufacturing	Course No	DS6101			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 4)	Status	Core		Elective X	
Prepared by	Dr Raguraman Munusamy					
Prerequisite		To take effect from	2021 Batch			
Course Objectives	This course will provide a broad technical knowledge and practical expertise of system requirements, design, analysis, verification and validation activities to enhance design and manufacturing capabilities. Students will gain an understanding of systems engineering, the model-based approach to design and manufacturing, the Digital Twin, and a roadmap toward a model-based enterprise.					
Course Outcomes	On successful completion of this course students will be able to: <ul style="list-style-type: none"><li>● Explain the value and expectations of systems engineering and model-based systems engineering, and the underlying motivations and opportunities represented by a model-based enterprise. They will develop the knowledge necessary to perform a baseline assessment of an organization’s potential to leverage model-based systems engineering.</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Module 1: Introduction to Systems Engineering (6 hours)</b> <ul style="list-style-type: none"><li>● Definition and properties of a system</li><li>● Systems Engineering and the LifeCycle</li><li>● Systems Engineering Process Overview</li><li>● Business Impacts of Systems Engineering</li></ul> <b>Module 2: Model-Based Systems Engineering (8 Hours)</b> <ul style="list-style-type: none"><li>● Model-Based Definition</li><li>● Model-Based Systems Engineering Methodologies</li><li>● Systems Modelling Language (SysML)</li><li>● Model-Based Systems Engineering (MBSE) Application Strategies</li><li>● Verification and Validation Strategies</li></ul> <b>Module 3: Applications of Model-Based Systems Engineering (4 hours)</b> <ul style="list-style-type: none"><li>● Model-Based Enterprise</li><li>● Digital Thread&amp; Digital Twin</li><li>● Business Aspects of the Model-Based Enterprise</li><li>● Realizing a Model-Based Enterprise</li></ul> <b>Module 4: Model-Based Enterprise (8 hours)</b> <ul style="list-style-type: none"><li>● Design Activities</li><li>● Configuration Management and Document Management</li><li>● Manufacturing Planning Activities</li><li>● Quality Requirements and Quality Planning Activities</li><li>● Enterprise Activities</li><li>● Your 4.0 Roadmap to Success</li></ul> Evaluation: 70% assignments/activities + 30% End Semester					
Texts & References	<ol style="list-style-type: none"><li>1. David Long and Zane Scott (2012), A primer for model-based systems engineering, Vitech Corporation, ISBN:9781105588105</li><li>2. Jose L. Fernandez and Carlos Hernandez (2019), Practical Model Based Systems Engineering, ARTECH, ISBN:9781630815790</li><li>3. **M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Elective-3:

Course Title	Simulation Driven Design	Course No	DS6102			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 4)	Status	Core		Elective X	
Prepared by	Dr Raguraman Munusamy					
Prerequisite		To take effect from	2021 Batch			
Course Objectives	This course will give theory and hand-on-training to conduct simulation across the product lifecycle from concept design to in-service operation across multiple disciplines encompassing structures, motion, fluids, thermal management, electromagnetics, system modelling and embedded systems, while also providing data analytics and true-to-life visualization and rendering..					
Course Outcomes	On successful completion of this course students will be able to: <ul style="list-style-type: none"><li>Demonstrate their software skills in the multi-disciplinary simulations including structural, fluids, thermal, manufacturing, systems modelling, IoT and multiphysics.</li></ul>					
Contents of the course (With approximate break up of hours)	<b>Topics to be covered:</b> <ul style="list-style-type: none"><li>Basic concept of finite element method</li><li>Modelling techniques</li><li>Mesh types</li><li>Boundary constraints</li><li>Material and Properties</li><li>Mechanical and thermal stress analyses</li><li>Dynamic response – impact and crashworthiness</li><li>Product optimization in terms of product size, shape and material</li><li>Non-linear stress analysis</li><li>Casting and deep drawing</li><li>Structural Optimization</li><li>System Modelling and Control Systems</li><li>Composite Analysis &amp; Optimization</li><li>Design of Experiment (DoE) Studies</li><li>Electromagnetic simulation</li></ul> Evaluation: 70% assignments/activities + 30% End Semester					
Texts & References	<ol style="list-style-type: none"><li>S.S. Rao (2018), The finite element method in engineering, Butterworth-Heinemann Publishers, UK, ISBN:9781856176613</li><li>Nam-Ho Kim (2018), Introduction to Non-linear finite element analysis, Springer, ISBN:9781441917454</li><li>NAFEMS (1992), A finite element primer, Bookcraft Ltd.</li><li>Paul Jacob and Lee Goulding (2002), An explicit finite element primer, NAFEMS Ltd., ISBN:9781874376453</li><li>A.A. Becker (2001), Understanding Non-linear finite element analysis, NAFEMS Ltd., ISBN:9781874376354</li></ol>					

**M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Design of non-invasive systems	Course No	DS6103			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 4)	Status	Core		Elective X	
Prepared by	Dr Jayachandra Bingi					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	This course is to cultivate the skill of appreciating the communication between system (Bio and mechanical) and environment. Further, plan the device to diagnose systems using suitable tools of noninvasive monitoring.					
Course Outcomes	After the completion of the course students will be in a position to appreciate the system-environment interaction and them decide on suitable tools such as electronic, acoustical, optical, photonic etc.					
Contents of the course (With approximate break up of hours)	<b>Module 1 (6 hrs)</b> <ul style="list-style-type: none"><li>● Introduction to non-invasive technologies, future perspectives</li><li>● System - environment interaction, modes and ways: Understanding</li></ul> <b>Module 2 (6 hrs)</b> <ul style="list-style-type: none"><li>● Design considerations for interaction quantification</li></ul> <b>Module 3 (30 hrs)</b> <ul style="list-style-type: none"><li>● Tools for noninvasive medical and machine monitoring</li><li>● Acoustic (Sonic)</li><li>● Electronic and electrical</li><li>● Photonic</li><li>● Optical</li><li>● Exploiting DSP, AI and ML</li></ul> Evaluation: 70% assignments/activities + 30% End Semester					
Texts & References	<ol style="list-style-type: none"><li>1. **M.Des. in Integrated Product Design  
Curriculum & Syllabus from 2021 Batch**

Course Title	Wearable Technologies	Course No	DS6104			
Specialization	Integrated Product Design	Structure (LTPC)	2	1	0	3
Offered for	Master of Design (Semester 4)	Status	Core		Elective X	
Prepared by	Dr Pandiyarasan Veluswamy					
Prerequisite	None	To take effect from	2021 Batch			
Course Objectives	This course aims to present wearable product designers with realistic, reliable knowledge of human anatomy and function from a design perspective.					
Course Outcomes	After completing the course, students will be able to structure wearable products that enhance health, performance, safety, and pleasure.					
Contents of the course (With approximate break up of hours)	<b>Module 1 (6 hrs)</b> <ul style="list-style-type: none"><li>Wearables: Fundamentals, Advancements, and a Roadmap for the Future</li><li>Human Body Diversity: Opportunity and Challenge</li><li>Wearable Product as Mediator between Environment and Human Body</li><li>Anthropometry and pattern grading</li></ul> <b>Module 2 (12 hrs)</b> <ul style="list-style-type: none"><li>Stability and Motion: Interactions in a Neuro-Musculo-Skeletal System</li><li>Integumentary System: Coverage and Protection</li><li>Wearable Electronics from Foils to Textiles: Materials, Devices, and Assembly</li><li>Energy Harvesting at the Human Body</li></ul> <b>Module 3 (12 hrs)</b> <ul style="list-style-type: none"><li>Low-Power Integrated Circuit Design for Wearable Biopotential Sensing</li><li>Mining Techniques for Body Sensor Network Data Repository</li><li>Modeling Physical Activity Behavior Change</li><li>Wireless Body Area Networks</li></ul> <b>Module 4: (12 hrs)</b> <ul style="list-style-type: none"><li>Wearable Sensors for the Monitoring of Physical and Physiological Changes in Daily Life</li><li>Wearing Sensors Inside/ Outside of the Human Body for the Early Detection of Diseases</li><li>Wearable and Non-Invasive Assistive Technologies</li></ul> Evaluation: 70% assignments/activities + 30% End Semester
